## Ball Trammel Sets and Ball Trammel Gauge Block

Ball trammels are for measuring seal ring grooves i.e RTJ's. A Hub Gauge is a modified vernier calliper; it is used to measure "Grayloc" type hubs. These can be made to customer's specifications, for example we have made a 24" Digital version.

The Ball Trammel Gauge Block is a simple to use device to allow the balls of the Ball Trammel to be set correctly. The Ball Trammel Gauge Block is fully calibrated and supplied with a calibration certificate
